Breaking Commitments

- Research on the compliance of states with international commitments emphasizes the deterrent effect of reputational damage
- The argument linking reputation to compliance with formal agreements remains largely unexamined

Existing Literature

- Simmons (2000): “The acceptance of treaty obligations raises expectations about behavior that, once made, are reputationally costly for governments to violate.”
- Buthe and Milner (2008): “Violating an institutionalized commitment or not making amends to correct a violation that has occurred damages a country’s reputation for keeping commitments, making future cooperation on the same and other issues more difficult and maybe impossible to achieve.”
- Allee and Peinhardt (2011): “The filing of a case before ICSID immediately brands the respondent country as an actor that is hostile to investors” and leads to “substantial losses in FDI.”

ICSID is a special place

- First, ICSID arbitration accounts for a majority of treaty-based investment disputes as of the end of 2014.
- Second, the ICSID is distinctive in terms of its visibility as an institution formally affiliated with the World Bank with broad legal authority.
- Third, unlike other international arbitration bodies, the ICSID maintains a public record of arbitral claims.

Role of Information Flows

- Investor-state dispute arbitration have not only produced inconsistent results, but even opposing ones in parallel cases involving identical sets of facts and parties but different treaties and arbitral tribunals.
- Information about an investment dispute may remain too limited to allow the investment community to gauge the extent to which treaty violations have occurred, especially for cases arbitrated confidentially.

Bivariate Relationship

Adding in some controls...

Design for Reputation Analysis

- Dependent variable: Investment Profile measure from ICRG
 - Ranges from 0 to 12
 - Focuses specifically on risk in the area of contract viability/expropriation, profit repatriation, and payment delays
- Key independent variables:
 - Disputes filed at ICSID (cumulative, two year, and five year counts)
 - Disputes not filed in other fora (cumulative, two year, and five year counts)
- Controls:
 - Ratified BITs, GDP growth, Population, Inflation, Internal and External Stability, Financial Openness, and Polity
